

# Mega-Cluster

INPUT (39 downto 0)

OUTPUT [39:0]

→ Giga-en → 4 bits used to enable the whole project

→ Mini-en → 4 bits

These 4 bits decides the which minicluster should be enable (blue colored blocks)

→ A, B, C ⇒ A (i/p) → 4 bits

B (i/p) → 4 bits

C (i/p) → Rotational i/p

→ sel → cu selection i/p's (12 bits)

→ Reset bit → Used to operate the D-flipflops inside the cu's storage inputs (1-bit)

→ Cu en → 4 bits

Cu en → bits used to enable the cu's inside the each cluster.

→ Mega-en → 4 bits.

used to operate the mega-clusters when possible.
